

Xsafe Edge protection Z

The lightweight alternative for safe structure edge

Formwork & Scaffolding.
We make it work.

Xsafe Edge protection Z

The lightweight alternative for safe structure edge

Xsafe Edge Protection Z offers a safe and economical solution for the structure edge. The optimised design makes this edge protection system light but at the same time strong. It corresponds to EN 13374 class A and supports productive and safe working on the structure shell.

Labour-saving & easy to handle

- At only 13.3 kg, this is one of the lightest barriers on the market
- Easy to erect as there are few individual parts
- Fast installation with self-explanatory system logic
- No slippage or overturning of stacked barrier grilles because they are held in place by the pallet's slot-in diagonal tube

Time-saving & flexible

- Speedy assembly with the ready-to-use Handrail post Z 1.20 m with integral shoe
- Easily combinable with Doka handrail post XP 1.20 m and Handrail-post shoe XP
- Individually configurable for fall protection at the structure edge

Economical & functional

- Design focus is on the essential basic functions
- Simple planning helps conserve resources
- Orderable 24/7 in the Doka Online Shop
- Optimised pallet size for economical transport

Setting up Xsafe Edge Protection Z is fast and easy. Lightness and ergonomic handling mean that as well as protecting against falls, it also helps safeguard the general health and well-being of our customers' site crews.

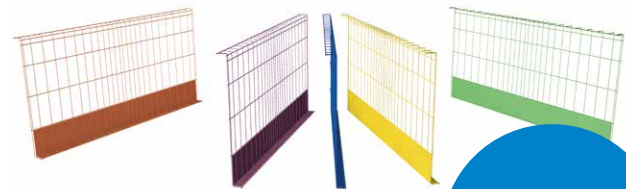

Patrick Längauer
Doka Formwork Instructor

Usable with the Handrail post Z 1.20 m or the tried-and-tested Handrail post XP 1.20 m

Few individual parts, so speedy set-up

Individual colour finishes of the Xsafe Edge Protection Z
