DokaFit Handset

Formwork & Scaffolding.
We make it work.

DokaFit Handset

Efficient forming. Fit for purpose.

Cost Efficient

Universal applicability for exceptional cost efficiency

- high-grade phenolic resin coated birch plywood
- universally suitable for wall, column, and foundation applications
- modular design with a 10cm increment grid reduces fitting areas
- optimised workflows for both manual and crane handling
- overall competitive pricing

Time Efficient

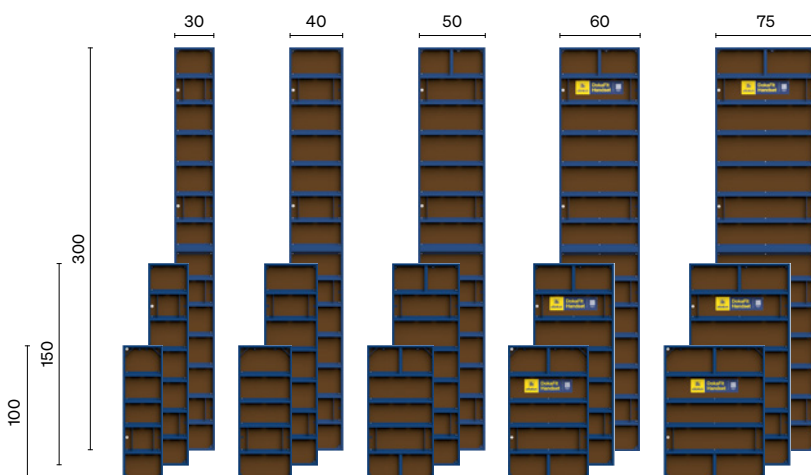

Fast, crane-independent forming for efficient workflows

- lightweight handset system with integrated ergonomic handles
- easy handling with rapidly connecting panels using DokaFit Handset clips
- simple adaptation to uneven ground with Frami clamps
- fast working due to low panel weight (only 30kg for the 0.75m × 1.5m panel) and no need for additional alignment profiles
- high permitted concrete pressure (up to 60 kN/m² for wall formwork and up to 75 kN/m² for column formwork) ensures faster pouring

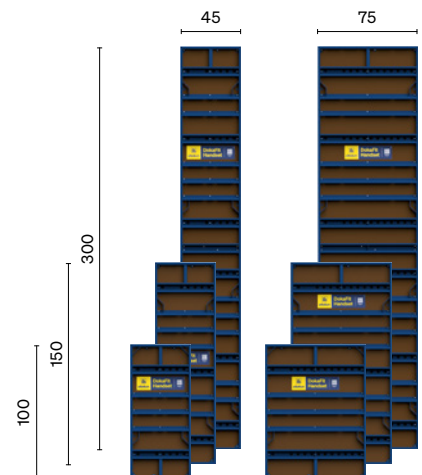

Designed for Durability

Strong panel frame for durability

- high strength, lightweight steel profiles ensure a high number of reuses
- highly durable thanks to rigid frame profiles and powder coating

Standard panels in various sizes for perfect adaptability.

Universal panels for columns and corners with panel connections every 5 cm.
