Strip shafts super-fast in a single step

Doka shortens your stripping time: Add hydraulic drive to the tried-and-tested Framax stripping corner I and make the job of stripping shaft formwork a one-step operation. The centrepiece of the drive is a high-power stripping cylinder, driven by a powerful hydraulic unit. Fast, easy and efficient.

Quick and efficient working

with the compact hydraulic drive

- In shafts of any size, the formwork is opened reliably by stripping cylinders with a rated lifting force of up to 100 kN
- Forming and stripping are many times faster compared to manual operation of the Framax stripping corners I
- Fully compatible with other Doka hydraulic units for permanent connection of multiple stripping corners

Ergonomic & easy to operate

designed to meet the requirements of users on site

- The stripping cylinder is controlled by a hand lever, no manual effort involved
- Stripping cylinders and battery hydraulic unit are weight-optimised, so far less physical effort needed for repositioning the equipment
- Cordless hydraulic unit with 28 V battery power, so no power cable to get in the way

More insights in our  video:

An optional second battery doubles the operating time of the hydraulic unit.

The carrying handle and shoulder strap ensure ergonomic repositioning of hydraulic cylinder and battery hydraulic unit.
