Easy, fast forming of shafts

The Framax stripping corner I was designed specifically for use with shaft formwork. It enables the formwork to be closed and opened in accordance with accident protection regulations, i.e. without using the crane, simply by operating easy-to-turn spindles with a reinforcement rod or the convenient ratchet. It is then lifted and reset in one piece, thus saving crane-time. The Framax stripping corner I is also suitable for use on pilasters and as an inside corner on wall formwork.

Super-short forming-times

by exploiting an innovative principle

The Stripping corner I lets you form shafts much more quickly

- cuts forming-times by as much as 75 %
- saves crane time by lifting the formwork in one piece
- any panel, of any width, can be used between the stripping corners
- better concrete appearance inside the shaft, as there is now no need for extra formwork stripping elements in the middle of the wall

Easy to handle

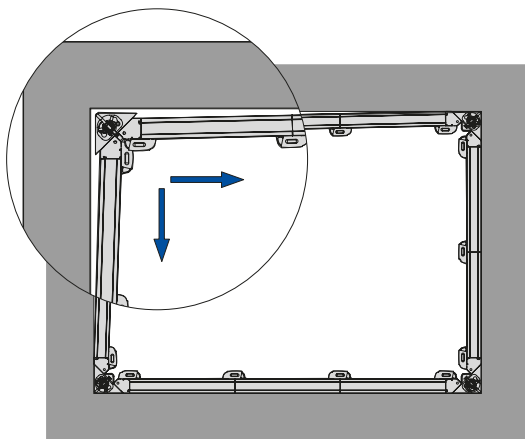

simply by turning a spindle

Benefit from how easy the device is to operate

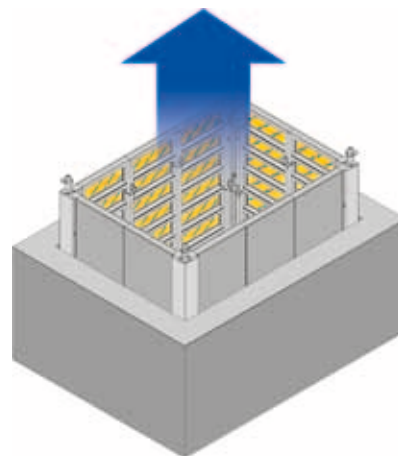

- set up and strip the formwork in a few simple steps
- is operated by just 1 person
- is operated from above without any special extra tools

Framax stripping corner I – simply quick

The formwork is detached very quickly, with a stripping play of 6 cm

The shaft formwork is lifted in one piece
