Bracket platform **M**

The lightweight, site-ready working platform,
protection platform and sloping-rooftop fall barrier

www.doka.com

The lightweight, site-ready working platform, protection platform and sloping-rooftop fall barrier

The Bracket platform M is a site-ready, lightweight working and protection platform that gives a big boost to safety in the field of masonry and pre-cast construction. The winner of an EU award, the Bracket platform M complies with both EN 12811-1 (for use as a working platform), and DIN 4420 (for use as a protection platform).

Fast, safe working

thanks to easy handling

Reduced labour and crane times, thanks to

- pre-assembled units built from a small number of rugged system components
- ready for use straight away, after a very few quick and easy actions
- quick-connection feature for joining the bracket to the decking

Tested safety

for reliable protection

Put the advantages of this EN 12811-1 certified Service and Working Scaffold to work for you

- high load-bearing capacity (max. 300 kg/m²) yet low dead weight
- safe platform workdeck, as the crane-hoisting points can be lowered out of the way
- safe corner transitions, thanks to Corner platform decking M
- winner of Safety Award from the European Agency for Safety and Health at Work

Outstanding cost-efficiency

on your project

Achieves cost-optimisation by

- having a long lifespan
- not taking up much storage and transport space (over 200 lin.m of platforms fit in one truck trailer)

Versatility

thanks to standardised system solutions

Depending on your needs, you can use these site-ready, lightweight platforms as

- working platforms
- protection platforms
- or as sloping-rooftop fall barriers

Optimum corner solutions with only one corner decking unit for both inside and outside corners
