Nonstop top. Xlife top sheet

Lasts long. Forms great.
Comes back recycled.

The Xlife top sheet is a further development of the proven Xlife panel and sets new standards in technology. It consists largely of recycled plastic, is 100% recyclable and is used for many Doka framed formwork systems. The Xlife top sheet impresses with its particularly long durability and an appealing concrete surface. This is non-stop top!

Sustainability

- Sheet core with 100% recycled plastic
- Sheet 100% recyclable: used sheets can be taken back and fully reintroduced into the cycle (closed loop)
- Significant reduction of product carbon footprint in comparison to conventional wood-composite sheets due to long lifespan

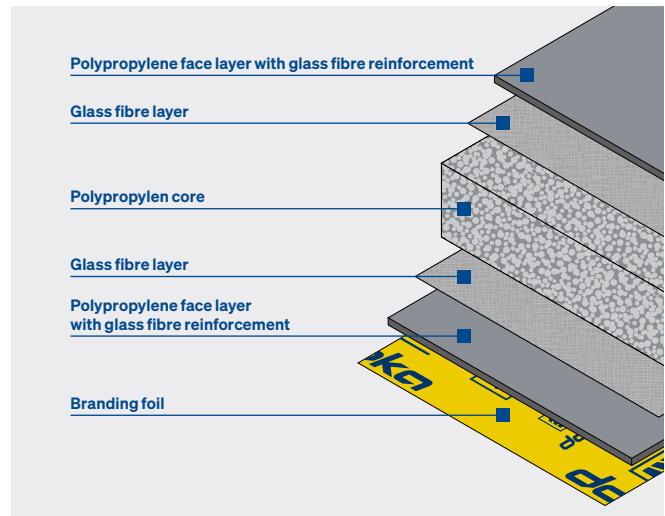

Economic efficiency

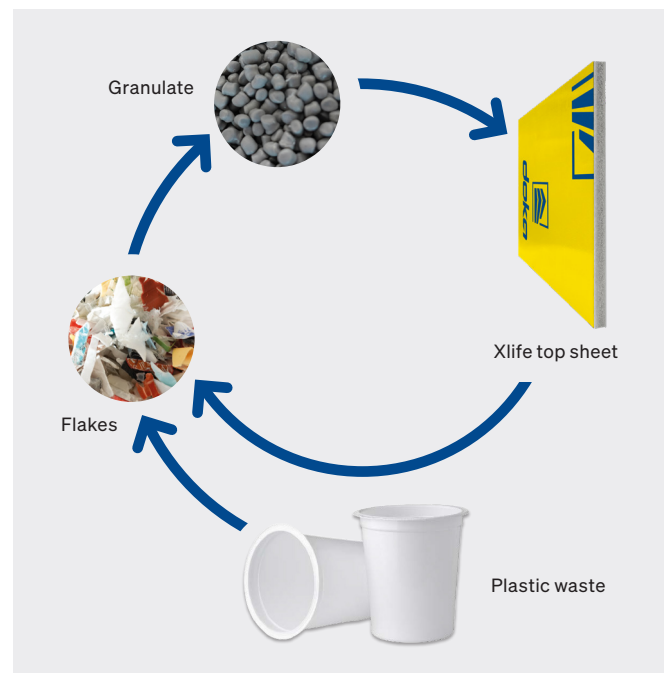

- Particularly high durability due to innovative plastic composite technology
- Low reconditioning costs due to robust sheet structure and diverse reconditioning methods
- Fast and easy cleaning even with high-pressure washers
- Less rework on the structure due to consistently good concrete appearance even after multiple re-uses

Appealing concrete surface

- Uniform concrete finish due to the new, silk-matt surface structure of the sheet
- High scratch resistance of the Xlife top surface
- Flatness due to flush installation of the sheet in the panel
- No staining on the concrete as e.g. with phenol resin sheets
