Framax Xlife plus concrete cone – The easy way to close form-tie holes

The Framax Xlife plus concrete cone 28/25 300 mm is a cone made of concrete for completely sealing Framax Xlife plus form-tie points.

Advantages at a glance

- Fast, easy handling, because installation is from one side
- Versatile for wall thicknesses from 15-30 cm; excess length is easily snapped off, depending on wall thickness
- Homogeneous wall structure, because sealing cone is made of concrete
- Tapered to match the shape of the form-tie hole, so the hole is completely filled

1. Coat the concrete cone with cement slurry or adhesive and insert it into the form-tie hole

2. Tap the concrete cone into the form-tie hole from the bigger side

3. Knock off the protruding end of the concrete with the hammer

4. Form-tie hole fully closed
