## The tried-and-tested high-speed tableform

---

Dokaflex tables are easy and practical to set up and can be shifted and adapted very quickly. This makes them a cost-effective and efficient way of carrying out large-area slab projects. Dokaflex tables can of course be combined with Dokamatic tables.

### Lower labour costs

thanks to fast repositioning

- rapid pace of work, as ready-assembled units can be travelled
- horizontal repositioning can be handled by just one person, with the highly manoeuvrable 'DoKart plus' shifting appliance
- vertical repositioning using the Table Lifting System TLS frees up the crane for other uses

### Perfect adaptability

to any requirement

- ready-to-use tables are supplied for all structure geometries
- infill zones can be integrated into the system by using insertion beams
- easily combined with Dokamatic tables and Dokaflex

### Minimised close-out costs

because of its outstanding system attributes

- longer service life due to the high-grade system components
- site logistics are simplified by the small number of different system components, all designed for optimum interoperability
- first-rate concrete surfaces, as any type of form-facing can be selected

**Fast construction workflows without the crane: with the Table Lifting System TLS, tableforms are brought up to the next floor at the push of a button.**

---

**Even with large-area floors, Dokaflex tables ensure rapid construction progress thanks to custom-designed concrete props.**
